Summary on Assignment 1 – Report on Visit to NALI 2023

There are lots of things that I have learned when I went to the NALI 2023 event. I get to learn about some of the innovative ideas on teaching and learning method that the participants have presented during the event. I get to understand in depth about certain software used to develop certain applications. At the same time, I also meet some UTM researchers and my course seniors. Thru this event I get to make some new friends. I also get to interview some of the participants regarding their innovative ideas on teaching and learning method. This activity helped to boost my confidence level up. Improvement that can be made on the event is, for the next NALI event they should organize during the weekend so that more students can come and join, since during the weekdays some of the students are busy with their classes. Overall, the event was fun and exciting and at same time I learnt lots of things that are related to the TIS course such as hardware, software and information systems.
